

STRATICYTE®

Predict Oral Cancer Risk

DON'T LEAVE IT TOO LATE

Testing is important – oral cancer is often found at a later stage, requiring major surgery. **Oral cancer can significantly impact your quality of life, and can even be fatal.**

The good news is **oral cancer can be treated successfully if it is caught early.**

EARLY TESTING IS CRITICAL.

"STRATICYTE® saved my life."

- H. Foy, Patient

"Using STRATICYTE®, both the clinician and the patient should have the peace of mind that their oral precancer, also known as Oral Potentially Malignant Disorder (OPMD), diagnosis is being managed with the most advanced technology currently available."

- Barrie Renick, BSc, DDS, Dip. Oral Path, Dip. Oral Surgery, MRDC(C)

"STRATICYTE® might be the Holy Grail in management of OPMD that we have been awaiting for, for years."

- Eric Dierks, MD, DMD

Could You Be
at Risk of
Oral Cancer?

Ask your healthcare provider
how STRATICYTE® can provide
greater clarity about your risk.

STRATICYTE®
Predict Oral Cancer Risk

SIGNS AND SYMPTOMS OF ORAL CANCER.

What to look for:

- Mouth sores for more than 2 weeks
- White, red or speckled patches in mouth
- Lumps or ulcers in mouth, or on lips
- Bleeding in mouth
- Sore throat and difficulty swallowing
- Lumps on neck

WHAT YOU SHOULD KNOW ABOUT ORAL CANCER.

The 5-year survival rate for oral cancer is 50%, compared to rates for cervical cancer (75%), melanoma (89%), breast cancer (89%), and prostate cancer (95%).*

- 1 death every hour in North America
- 450,000 new cases worldwide each year
- 50% of oral cancer cases end in death

EARLY DETECTION IS CRITICAL

If it isn't caught early, oral cancer is much harder to treat. **Late stage oral cancer often requires major surgery and may severely impact your quality of life, and can even be fatal.**

SPOT IT. TEST IT.

The spot in your mouth could be oral cancer, or it could become oral cancer.

KNOWING MATTERS

The standard test, called **histopathology**, involves taking a biopsy of your oral lesion and sending it to a lab to be examined by a Pathologist. **Histopathology** is helpful to determine if your lesion is precancerous, or is cancer, right now - but it can't look to the future.

Histopathology alone can't tell if your lesion will become cancer.

LOOK DEEPER, SEE FARTHER

STRATICYTE® is available for oral precancer testing, and can be performed on the same biopsy used by the Pathologist. **No additional biopsy is required.** **STRATICYTE®** can also be used on some older biopsies, ask your healthcare provider for more information.

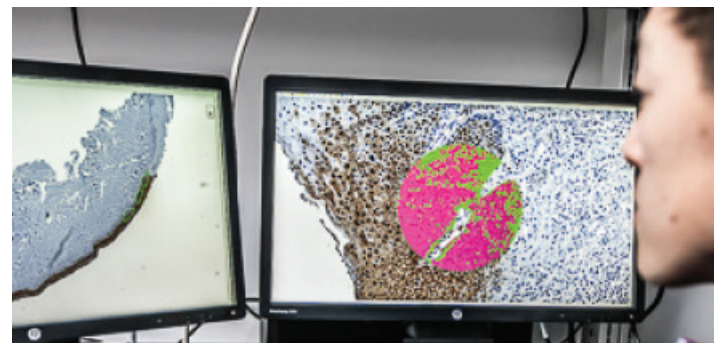

STRATICYTE® supplements standard histopathology results by providing your healthcare professional with a personalized risk score for your oral lesion.

STRATICYTE® shows your risk of developing oral cancer in the next 5 years.

Having accurate, objective, future-focused information together with your pathology results, allows your healthcare provider to develop a tailored & more effective treatment plan for you.

SIMPLE, PRECISE, EFFECTIVE.

STRATICYTE® delves deeper into your biopsy, using patented AI-driven cellular assessment to **accurately and objectively determine your personalized 5-year oral cancer risk.**

KNOW YOUR OPTIONS.

TALK TO YOUR HEALTHCARE PROVIDER ABOUT STRATICYTE®.

STRATICYTE® is provided by Proteocyte Diagnostics Inc. There is a cost for the **STRATICYTE®** test, which may be covered by your private health insurance.

Proteocyte's Patient Support Program is here to help you understand the billing and insurance process, and answer questions about potential out-of-pocket costs related to STRATICYTE® testing.

Our Patient Support Coordinators are available Monday–Friday, 9am –5pm ET, excluding holidays, at 1-833-577-6836 or clientservices@proteocyte.com
